Counties Comprising Idaho Health Districts	28

IDAHO RESIDENT SUICIDE

Purpose

The purpose of this report is to provide a comprehensive view of deaths among Idaho residents by Intentional self-harm (suicide). Resident suicide deaths include all deaths where suicide was listed as the underlying cause of death, regardless of where the death occurred. The Bureau of Vital Records and Health Statistics receives death records for those Idaho resident deaths that occur in Idaho and out of state. This report provides data for the most recent year available, 2013, trends for the U.S. and Idaho, trends by gender for Idaho, and data by gender, age, race, ethnicity, place of residence, military status, and mechanism of injury from 2009 to 2013. Findings below are based on five-year aggregate numbers and age-adjusted rates from 2009 to 2013 unless otherwise noted.

Findings

IDAHO AND U.S.:

- Suicide was the 10th leading cause of death in the U.S. in 2011 (latest year available), and 8th leading cause of death among Idaho residents in 2011, 2012, and 2013.
- In 2011, Wyoming had the highest rate of suicide in the nation (23.1 deaths per 100,000 population); Idaho and Nevada had the 7th highest rate in the nation (18.4 deaths per 100,000 population), following Wyoming, Montana, New Mexico, Utah, Alaska, and Oklahoma.
- In 2011, The District of Columbia, New Jersey, and New York had the lowest rates in the nation with 5.6, 7.4, and 8.1 deaths per 100,000, respectively.
- Idaho's rate was 49.6 percent higher than the U.S. rate in 2011 (12.3 deaths per 100,000 in the U.S.).
- In the past five years, 1,488 Idaho residents died by suicide. The number of deaths ranged from a low of 284 deaths in 2011 to a high of 308 deaths in 2013.

GENDER:

- Suicide was the cause of death for 1,173 males and 315 females from 2009-2013.
- The rate for males (30.5 deaths per 100,000 males) was significantly higher than the rate for females (8.2 deaths per 100,000 females).
- The rank of leading cause of death for males and females were:
 - 6th highest cause of deaths among males
 - 11th highest cause of death among females
- For the past ten years, rates for males were significantly higher than rates for females every year. However, the rates for males and the rates for females did not change significantly in the past ten years.
 - The age-adjusted rate for males was 28.7 deaths per 100,000 males in 2004 and was 30.7 deaths per 100,000 males in 2013.
 - The age-adjusted rate for females was 6.9 deaths per 100,000 females in 2004 and was 8.0 deaths per 100,000 females in 2013.

AGE:

- The mean age at death for suicide by gender was:
 - Age 46.2 for males
 - Age 44.3 for females
- The highest age-specific rates for males and females were:
 - Age 85 and older for males (72.3 deaths per 100,000 males aged 85 and older)
 - Age 45-54 for females (15.0 deaths per 100,000 females aged 45-54)
- The age group with the highest number of deaths was:
 - Age 45-54 for males (244 deaths)
 - Age 45-54 for females (77 deaths)
- Suicide was the 2nd leading cause of death for 10-14, 15-24, 25-34, and 35-44 year old age groups.

DISTRICT:

- District 2 had the lowest number of suicide deaths among the seven districts (105 deaths).
- District 6 had the highest suicide rate with 22.5 deaths per 100,000 population (178 deaths).
- District 4 had the highest number of suicide deaths (353), but had the lowest suicide rate with 15.8 deaths per 100,000 population.
- Suicide was the 7th leading cause of death among residents of District 6, the 8th leading cause among Districts, 1, 3, 4, 5, and 7, and the 9th leading cause of death among District 2 residents.

COUNTY:

- The county with the highest age-adjusted suicide rate was Clark County with 97.2 deaths per 100,000 population (4 deaths), followed by Custer County (54.4 deaths per 100,000, 12 deaths), and Camas County (43.9 deaths per 100,000, 2 deaths).
- The counties with the lowest rates were Madison County with 7.7 deaths per 100,000 population (10 deaths), Power with 9.6 deaths per 100,000 (4 deaths), and Latah with 13.0 deaths per 100,000 (23 deaths).
 - Caution must be exercised when attempting to draw conclusions from rates that are based on small numbers. It is recommended to show the number with the rate.

RACE AND ETHNICITY:

- The highest number of suicide deaths occurred among the non-Hispanic white population (1,386 deaths).
- The highest age-adjusted suicide rate occurred among non-Hispanic American Indian and Alaska Natives (23.1 deaths per 100,000 population (24 deaths)
- The lowest age-adjusted suicide rate occurred among the non-Hispanic Asian/Pacific Islander population with 4.1 per 100,000 population (5 deaths).
- Suicide was the 8th leading cause of death among non-Hispanics, and was the 6th leading cause among Hispanics.

MECHANISM OF INJURY:

- Of the 1,488 Idaho resident suicide deaths, 903 (60.7 percent) involved a firearm.
- Firearms, poisoning, and hanging, strangulation and suffocation made up 95.4 percent of all Idaho resident suicide deaths.
- Leading mechanism of injury differed among males and females. Firearm was the leading mechanism for males; 67.7 percent of suicides among males involved a firearm. Poisoning was the leading mechanism among females; 38.7 percent of suicides among females were from poisoning.
- The mean age at death by mechanism:
 - Age 48.2 for suicide by firearm
 - Age 46.5 for suicide by poisoning
 - Age 37.4 for suicide by hanging
 - Age 39.5 for suicide by jumping from high place
 - Age 48.5 for suicide by drowning
 - Age 46.9 for suicide by cutting (sharp object)
 - Age 41.9 for suicide by all means

MILITARY STATUS:

- Among Idaho residents aged 18 and older, there were 1,421 suicide deaths from 2009 to 2013. Of 1,421 deaths, 333 (23.5 percent) occurred to people who had ever been in U.S. Armed Forces. The death may have occurred at the time the person was in the military or after leaving the military.
 - Of the 129 men aged 18-24 who died by suicide, 13 (10.1 percent) were ever in the military.
 - Of the 789 men aged 25-64 who died by suicide, 179 (22.7 percent) were ever in the military.
 - Of the 200 men aged 65+ who died by suicide, 128 (64.0 percent) were ever in the military.
- In comparison, 4.8 percent of males aged 18-24, 28.5 percent of males aged 25-64, and 67.0 percent of males aged 65 and older who died from all other causes of death (non-suicide deaths) were ever in the U.S. Armed Forces.
- Suicide by firearm was more prevalent among people who had ever been in the military than those who had never been in the military. Firearms were involved in 77.8 percent of suicide deaths to adults aged 18 and older who ever served in U.S. Armed Forces and 55.7 percent of those who had never served in U.S. Armed Forces.

Military status is based on the following question on the death certificate: 'Ever in U.S. Armed Forces'?

Note: All rates provided in the findings are age-adjusted to the U.S. 2000 standard population and are based on five-year aggregate data 2009-2013 unless otherwise noted. All percentages provided in the findings are based on death records with known outcome for the indicator. Records with unknown outcomes were deleted from the denominator prior to calculating the percentage. Significant differences provided in the findings are based on statistical significance at the 0.05 level.

Table 1
Idaho Resident Deaths
Number and Rank in Leading Causes of Death
1970, 1980, 1990, 2000, 2010, and 2013

CAUSE OF DEATH	YEAR OF DEATH					
	2013	2010	2000	1990	1980	1970
All Causes	12,426	11,411	9,535	7,387	6,762	6,145

Influenza and Pneumonia	259 (9)	215 (9)	286 (7)	305 (6)	211 (6)	207 (5)
Chronic liver disease and cirrhosis	201 (10)	152	113 (10)	54	76	*
All other causes	3,529	2,961	1,971	1,260	1,169	1,203

* Data not available or not comparable.

Leading causes of death are based on the top 10 causes of death for the most recent year.

2013, 2010, and 2000 data based on the International Classification of Diseases, Tenth revision. 1990 and 1980 data are based on the International Classification of Diseases, Ninth revision. 1970 data based on the International Classification of Diseases, Eighth Revision. Numbers enclosed in parenthesis denote cause of death rank for that year. Those years with rank missing represent a leading cause of death for that year that is not in the top 10 causes of death for that year.

Chart 2
Idaho and U.S. Resident Suicide Deaths
Age-Adjusted Rate
1999-2013

Rate: number of deaths per 100,000 population.

Percent change: $((\text{Current year age-adjusted rate} - \text{prior year age-adjusted rate}) / (\text{prior year age-adjusted rate})) * 100$.

NA: not applicable; NC: no change.

U.S. data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

Chart 3
Suicide Deaths
Age-Adjusted Mortality Rate for Idaho and Surrounding States
2011

In addition to Wyoming, Montana, and Utah, New Mexico (20.4 deaths per 100,000), Alaska (19.4 death per 100,000), and Oklahoma (18.5 deaths per 100,000) had rates higher than Idaho in 2011.

Map 1
Suicide Deaths
Age-Adjusted Mortality Rate for Idaho and Surrounding States
2011

Note: 2011 U.S. data are the latest available. Data source for states other than Idaho: Latest state data available from Centers for Disease Control and Prevention, WISQARS online database, www.cdc.gov/injury/wisqars/index.html.

Hispanic	11	5.8	5	5.1	6	6.6
Mechanism						
Firearm	200	64.9%	171	70.1%	29	45.3%
Poisoning	54	17.5%	31	12.7%	23	35.9%
Hanging, strangulation, & suffocation	38	12.3%	33	13.5%	5	7.8%
Jumping from high place	4	1.3%	3	1.2%	1	1.6%
Drowning	2	0.6%	1	0.4%	1	1.6%
Cutting (sharp object)	2	0.6%	1	0.4%	1	1.6%
All other means	8	2.6%	4	1.6%	4	6.3%

Rate: Number of deaths per 100,000 population in the corresponding group. For the age group <15, number of deaths is based <15 years, and population is based on 10-14 years.

Note: The reader is cautioned that rates based on small numbers (<20 events) are considered unstable; caution must be exercised when attempting to draw conclusions from small data bases. It is advised to show the number of deaths with the rate.

Table 7
Idaho Resident Suicide Deaths
Number and Age-Adjusted Rate by Gender and District of Residence
Five-Year Aggregate: 2009-2013

GENDER		TOTAL	DISTRICT OF RESIDENCE						
			1	2	3	4	5	6	7
Total	Total, Both Genders	1,488	234	105	228	353	195	178	195
	Age-Adjusted Rate	19.2	20.5	18.6	18.9	15.8	21.9	22.5	20.4
Male	Total, Males	1,173	182	90	178	268	154	143	158
	Age-Adjusted Rate	30.5	32.4	31.4	29.9	24.3	34.4	35.8	33.5
Female	Total, Females	315	52	15	50	85	41	35	37
	Age-Adjusted Rate	8.2	9.1	6.0	8.4	7.5	9.7	9.5	7.6

Rate: number of deaths per 100,000 population in the District. Rates for males and females are per 100,000 males and females, respectively.

Chart 4
Idaho Resident Suicide Deaths
Age-Adjusted Rate by Gender and District of Residence
Five-Year Aggregate: 2009-2013

Rate: number of deaths per 100,000 population in the District. Rates for males and females are per 100,000 males and females, respectively.

Table 8
Idaho Resident Suicide Deaths
Number, Age-Adjusted Rate, and Age-Specific Rate by Gender
Five-Year Aggregate: 2009-2013

AGE GROUP	TOTAL		MALE		FEMALE	
	Number	Age-Adjusted Rate and Age-Specific Rates	Number	Age-Adjusted Rate and Age-Specific Rates	Number	Age-Adjusted Rate and Age-Specific Rates
Total	1,488	19.2	1,173	30.5	315	8.2
<15*	15	2.6	12	4.0	3	1.1
15-24	219	19.4	172	29.8	47	8.5
25-34	202	19.2	168	31.3	34	6.6
35-44	262	27.2	193	39.4	69	14.5
45-54	321	31.4	244	47.9	77	15.0
55-64	243	26.2	184	40.0	59	12.6
65-74	119	20.5	103	36.1	16	5.4
75-84	68	22.0	63	44.8	5	3.0
85+	39	29.9	34	72.3	5	6.0

Note: The reader is cautioned that rates based on small numbers (<20 events) are considered unstable; cautioned must be exercised when attempting to draw conclusions from small data bases. It is advised to show the number of deaths with the rate.

Chart 5
Idaho Resident Suicide Deaths
Age-Specific Rate by Age Group and Gender
Five-Year Aggregate: 2009-2013

Rate: number of deaths per 100,000 population. Rates for men and women are per 100,000 within specified gender and age groups.

*Rates for <15 are based on persons aged <15 for deaths and aged 10-14 for population.

2013	244	30.2	30.7				64	7.9	8.0			

Chart 6
Idaho and U.S. Resident Suicide Deaths
Age-Adjusted Rates by Gender
Ten-Year Trend: 2004-2013

Crude rate: Number of deaths per 100,000 population by gender.

Age-adjusted rate: Number of deaths per 100,000 population age-adjusted to the U.S. 2000 Standard population.

U.S. data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

(X72) Suicide by handgun discharge	384	330	54	4.9	8.3	1.4	25.8%	28.1%	17.1%
(X73) Suicide by rifle, shotgun, and larger firearm discharge	161	153	8	2.0	3.9	0.2	10.8%	13.0%	2.5%
(X74) Suicide by other and unspecified firearm discharge	358	311	47	4.5	7.9	1.2	24.1%	26.5%	14.9%
(X80) JUMPING FROM A HIGH PLACE	17	13	4	0.2	0.3	0.1	1.1%	1.1%	1.3%
(X75-X79, X81-X84 AND Y87.0) ALL OTHER	34	24	10	0.4	0.6	0.3	2.3%	2.0%	3.2%
(X75) Suicide by explosive material	-	-	-	-	-	-	-	-	-
(X76) Suicide by smoke, fire, and flames	1	-	1	-	-	-	0.1%	-	0.3%
(X77) Suicide by steam, hot vapors, or hot object	-	-	-	-	-	-	-	-	-
(X78) Suicide by sharp object	10	9	1	0.1	0.2	-	0.7%	0.8%	0.3%
(X79) Suicide by blunt object	-	-	-	-	-	-	-	-	-
(X81) Suicide by jumping or lying before moving object	6	2	4	0.1	0.1	0.1	0.4%	0.2%	1.3%
(X82) Suicide by crashing of motor vehicle	9	6	3	0.1	0.2	0.1	0.6%	0.5%	1.0%
(X83) Suicide by other specified means	5	4	1	0.1	0.1	-	0.3%	0.3%	0.3%
(X84) Suicide by unspecified means	3	3	-	-	0.1	-	0.2%	0.3%	-
(Y87.0) Sequelae of suicide	-	-	-	-	-	-	-	-	-

Rate: number of deaths per 100,000 population by gender.

Note: (-) is equal to zero or a rate that rounds to less than 0.1.

Table 19
Idaho Resident Suicide Deaths to Adults Aged 18 and Older
Military Status by Year of Death
1999-2013

YEAR	TOTAL	Military Status		
		Yes	No	Unknown
TOTAL	3,453	885	2,544	24
1999	168	48	119	1
2000	157	45	111	1
2001	199	50	149	-
2002	193	55	136	2
2003	210	63	142	5
2004	230	50	174	6
2005	219	65	151	3
2006	207	53	154	-
2007	212	48	163	1
2008	237	75	162	-
2009	298	66	232	-
2010	278	70	206	2
2011	269	68	201	-
2012	280	59	220	1
2013	296	70	224	2

Chart 7
Idaho Resident Suicide Deaths to Adults Aged 18 and Older
Percent by Military Status
5-Year Aggregate: 2009-2013

(Based on 1,421 Deaths)

Military status is based on the following question on the death certificate: 'Ever in U.S. Armed Forces?'

Special note for comparison: For all other deaths to persons aged 18 and older, 29.5 percent were ever in the U.S. Armed Forces and 70.5 percent not ever in the Armed Forces. Percentages are based on records where military status was known, deaths from 2009 to 2013.

Table 20
Idaho Resident Suicide Deaths to Adults Aged 18 and Older
Military Status by Mechanism of Injury
Five-Year Aggregate: 2009-2013

MECHANISM	TOTAL	MILITARY STATUS		
		Yes	No	Unknown
TOTAL	1,421	333	1,083	5
Firearm	864	259	603	2
Poisoning	252	28	223	1
Hanging, strangulation, and suffocation	237	32	203	2
Jumping from high place	17	3	14	-
Drowning	17	5	12	-
Cutting (sharp object)	10	2	8	-
All other means	24	4	20	-

Percentage of Suicide Deaths by Mechanism of Injury
Five-Year Aggregate: 2009-2013

Persons Who Ever Served in the U.S. Armed Forces

Persons Who Never Served in the U.S. Armed Forces

NOTES

Cause of Death Classification

The ICD-10 codes included in the Intentional self-harm (suicide) category are: ICD10: X60-X84, Y87.0, and U03.9.

Analysis on the mechanism of death for Intentional self-harm (suicide) is done using the ICD-10 code given by the certifier. The categories and codes are as follows:

MECHANISM	ICD-10 CODE
Intentional self-harm by poisoning	X60-X69
Intentional self-harm by hanging, strangulation, and suffocation	X70
Intentional self-harm by drowning and submersion	X71
Intentional self-harm by discharge of firearms	X72-X74
Intentional self-harm by explosive material	X75
Intentional self-harm by fire/hot object or substance	X76-X77
Intentional self-harm by cut/pierce	X78
Intentional self-harm by struck by or against	X79
Intentional self-harm by jumping from a high place	X80
Intentional self-harm by jumping or lying before moving object	X81
Intentional self-harm by crashing of motor vehicle	X82
Intentional self-harm by other specified means	X83
Intentional self-harm by unspecified means	X84
Sequelae of intentional self-harm	Y87.0
Terrorism intentional suicide by other and unspecified means	U03.9

Race and Ethnicity

Race and Hispanic origin of the decedent are reported separately on the Idaho death certificate. Persons of Hispanic origin may be of any race. The number of deaths and death rates for Hispanics should be interpreted with caution. According to the National Center for health Statistics (NCHS), Hispanic ethnicity is underreported on the death certificate, and there are inconsistencies in reporting Hispanic origin on the death certificate as compared with ethnicity on censuses, surveys, and birth certificates.

Age-Adjusted Mortality Rates Standardized to the Year 2000 U.S. Standard

Age adjustment is a statistical technique used to standardize rates. The technique is employed when comparing two or more populations with different age distributions. Age-adjusted rates are recommended when making comparisons in the rates of age-related health events, such as deaths, between different populations or for comparing trends in a given population over time. Age-adjusted rates are artificial measures for comparison purposes only and should not be used to measure the absolute magnitude of a health issue. To allow for comparison, the same standard population must be used. If different standard populations are used to compute the age-adjusted rates (1940 and 2000, for example), then the age-adjusted rates are NOT comparable. Statistically, an age-adjusted rate is a weighted average of the age-specific death rates, where the weights represent the fixed population proportions by age.

Average annual age-adjusted rates in this report were standardized to year 2000 U.S. standard million population (shown as proportion of the population or weights). The total population for each three-year period was used to calculate the average-annual rates. Rates were developed using the following steps for the direct method:

- 1) Calculate **age-specific rates** for the 11 age groups used in the U.S. 2000 standard million:

$$\left[\frac{\text{Annual number of deaths in age group}}{(\text{Total population of age group for corresponding years})} \right] \times 100,000$$

- 2) Calculate **expected number of deaths** for each age group:
(2000 U.S. standard million population (weight) of age group) x (Age-specific rate)
- 3) Calculate **age-adjusted rate per 100,000 persons**:
(Sum of expected deaths for all age groups)

Small Numbers and Rates

Please note that the smaller the number of events upon which the rate is based, the larger the confidence interval will be. This clearly demonstrates the wider variability (and lesser reliability) of rates based on smaller numbers. As a general rule, age-adjusted rates based on less than 20 events should be considered unstable and are not recommended for comparative use or in determining significance.

Health Districts

Idaho is comprised of seven Health Districts and seven Regions. The counties in each are the same with one exception. Butte County is located in Health District 6, but is in Region 7. This report provides data based on the Health Districts.
